

SMART VIVAGO SAFETY SOLUTION

Sensors provide added versatility and safety to the Vivago solution

The smart Vivago safety solution can be seamlessly integrated with a variety of sensors to quickly send alarms in case of abnormal situations. The alarms and data generated by the sensors are shared with care professionals via Vivago Vista software and the MOBILE app. The sensors are wireless and easy to install.

Fire alarm sensors enhance safety and peace of mind

Vivago fire safety sensors provide safety at home and in a variety of assisted living and healthcare facilities. Sensors send an alarm to Vivago solution if smoke is detected or if there is a sharp rise in temperature at home or in care unit.

Fire safety

Wireless smoke alarm

- Warns the customer of smoke detection with a loud sound and forwards the information to the Vivago solution.
- Helps to detect a fire at an early stage.

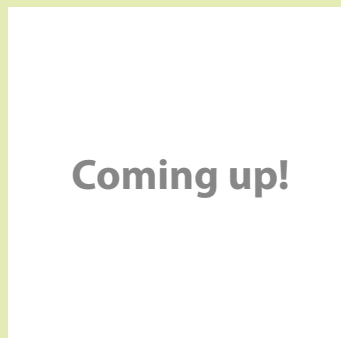

Wireless heat alarm

- Reacts to rapid, sharp temperature rises, for example in kitchens.
- Warns the customer with a loud sound and forwards the information to the Vivago solution.

Wireless CO alarm

- Detects invisible and odourless carbon monoxide.
- Warns the customer with a loud sound. In addition forwards the information to the Vivago solution and protects the customer from dangerous exposure.

Vivago[®]

Note! Vivago solution is not a fire alarm or fire safety solution. Vivago fire safety devices are certified:

- Wireless smoke alarm: EN 14604 certified
- Wireless heat alarm: EN 54 and DIN 14676 certified

Other Vivago safety sensors for customers and care professionals use

In home care, assisted living and healthcare environments, the Vivago solution can be integrated with sensors that enhance the safety of both customers and care personnel.

Wireless movement sensors detect movement in specific areas, supporting the safety of the person and the environment.

Wireless door sensor provide occupancy information on doors and windows.

Remote alarm buttons The alarm button can be used to quickly make an alarm and call for help. The alarm button is suitable for use by the customer at home or in care unit in the customer's room, as well as by care personnel.

Other safety sensors

Wireless movement sensor

- Monitoring movement at home or in the care unit.
- Supports the safety of the individual and the environment.

Wireless door sensor

- Provides information on the use of doors and windows.
- Use e.g. in customer rooms, homes and toilet, fridge, microwave oven doors and windows of a property.

Remote alarm button

- Allows an alarm to be made in a defined area, e.g. in home or customer room.
- Can be configured for customer or care personnel use e.g. in shower or lounge areas.
